

# Black Market Gaming

Peer to Peer trading for gamers worldwide.

## Project Goal:

Black Market Gaming's ultimate goal is to create a platform that enables gamers to build profitable situations based on their hard work and dedication to the games they love the most.

We believe that an interconnected network of blockchain and gamers can create a self-sustaining economy, benefiting gamers on a global scale. Our aim is to create more advantageous financial situations generated from the commitment of online gamers to their craft.

## The Problem:

For years and years, the largest issue has remained the same. Gamers dedicate their time, energy, and funds to their favorite MMORPG's, only to be left with very limited outlets for monetary gain. Gamers need a place to showcase and monetize their dedication. To collaborate and openly transact with other gamers across the globe. This is where **Black Market Gaming** comes in.

## The Solution:

**Black Market Gaming** aims to create a peer-to-peer marketplace, enabling gamers from all of the biggest MMO's to buy, sell and trade their gear and services to other participants for cryptocurrency. In turn, they can then purchase gear or services for various games, as well as other online services tied to our platform. The BMG token will be the only token used to make transactions on our platform.

**BMG** will be deployed on the Polygon blockchain. This is to ensure satisfactory transaction speed order at next-to-no transaction fees. **CARNAGE** NFTs will also be on polygon for the same reasons

## Target Audience:

**Black Market Gaming's** primary marketing targets are crypto users and MMO gamers. We aim to clearly define the benefits of combining blockchain and gaming. This will show what a truly decentralized trading platform can create for gamers on a global scale. Think of the countless hours you, or others you know, have put into gaming with nothing more to show off than some cool gear and a high level character. At **Black Market Gaming** you will be able to turn a real profit from your hard work in game. This can be the driving force necessary for a truly sustainable income for gamers globally.

On **Black Market Gaming**, you could be running your favorite dungeons, farming the highest quality gear, completing tasks for rare items, all capable of being used to earn returns as cryptocurrency

## Self Funded Events:

**Black Market Gaming** aims to create events for our users and also to help draw attention to our own native NTF-game. We plan to create and sponsor teams for certain competitive E-Sports style games .

**Black Market Gaming** will play host to its own NFT-trading card game, **CARNAGE**.

**CARNAGE** is a truly fast paced trading card game that lasts no longer than a few minutes but provides a high level of thought, planning and adrenaline to foster a fun, competitive meta. **CARNAGE** is similar to the card game known as "TRIPLE TRIAD". However, **CARNAGE** has many modifications to increase complexity and competitiveness as well as to foster a new playstyle of card game of its own

## How it works:

The following five slides display samples of how to get onto and navigate the **BMG** forums including:

- Creating an account
- Logging in
- Creating a username
- Navigating to the forums
- Finding specific sub-forums
- Creating and responding to threads
- Initiating a trade
- Executing a transaction via our forums

## Getting on site.

Users will need to do a few things before having the ability to fully interact with our platform.

- Navigate to the site
- Connect with metamask on the MATIC network
- Create a username
- Ensure they are logged in.

## Create account

You can easily Sign Up using your metamask wallet

## Navigate to the right forum.

Next, users will need to find the proper sub-forums relating to their game, including:

- Game name
- Server name

This will be where discussion and trading threads occur.

## Initiating a trade.

Once a user that wants to buy your item or sell you theirs is known, there are multiple ways to finalize your trade including independent settlements and mediation.  
\*There is a thread in the rules section detailing how to execute and complete trades on our platform.\*

## Sending tokens.

At some point while using the **BMG** platform you will need to send tokens to someone for items or services. There is a very simple payment tab next to all users names in threads, as well as in their profiles. After selecting the payment button a pop-up will occur, prompting you to select total **BMG** to send, as well as a message option where you will state what it is you are buying and for how much. Send and confirm via metamask and the transaction will occur shortly after.

Team payment and development costs (retroactive) - \$50,000

NFT trading card game development - \$50,000

In game and forum moderators - \$25,000

Emergency use funds - \$25,000

## What Is Carnage?

**CARNAGE** is a trading card game in the early stages of development by the BMG team. **CARNAGE** is based on a trading card game named “Triple Triad”.

All **CARNAGE** cards will be released as NFT's on the MATIC blockchain.

**CARNAGE** will have two starter sets to choose from as well as random packs.

Following its release, **BMG** will host monthly Carnage tournaments with prizes from us, as well as from sponsors and affiliates.

**CARNAGE** tournaments will be live streamed and advertised.

We aim to turn **CARNAGE** into one of the most enjoyable and most competitive quick play trading card games in existence.

More details to come as development moves along. Please keep in mind this is in very early stages of development and may take some time before completion.

card sample.

## Official Team

BMG has taken the time, effort and personal funding to ensure as much community trust as possible. We have chosen to do our KYC procedures through Assure. Assure is a project that facilitates security for new projects by providing a KYC service for new projects that aim to launch as anonymous while still providing security to the community. Assure has all of our teams personal information in the event that any nefarious activity occur. Assure stores this information in a secure way but, when presented with the appropriate legal documents will yield requested information to legal authorities. At BMG we rest Assured that our personal information is safe and that this service will provide security to the community that we aim to build as to solidify BMG as a legitimate project in the space.

\*For more information please feel free to consult Assure independently and do your own due diligence on the subject. Thank you.\*

## Disclaimer

These tokens are to operate as utility tokens. We do not take any responsibility for any lost or stolen goods or services that occur on, through or with our tokens and on our platform. cryptocurrency and blockchain technology is still very much a grey area in this day and age. **Black Market Gaming** will be launching with a functioning service and as such will have an immediate use case for the utility tokens that we plan to create. A utility token sale facilitated by a launchpad VIA IDO will be conducted. We have done our due diligence on providing private personal information to a Know Your Customer blockchain service to provide a layer of safety and security to investors. We do not claim any responsibility for any resulting issues stemming from your use of our platform and if interpreted as any unsafe, or nefarious reasons we reserve the right to revoke access to any and all individuals who make attempts to abuse our platform and / or token for the wrong reasons. **BMG** tokens are utility tokens, and have no inherent value. Their value is only what the token users deem it to be. **BMG** tokens are the ONLY tokens useable on our platform however we cannot stop users from buying, selling and trading **BMG** tokens on secondary platforms. **BMG** tokens are to be used for services on and through our platform. **BMG** tokens have zero inherent value and as such purchasing these tokens should not create any such expectation of gain of value, as its value is determined by the users of the platform.
